# Global Economic Outlook DuPont Capital Management May 24, 2011

Brett F. Sumsion, CFA

Managing Director, Asset Allocation

#### **O**utline

- The US economic recovery
- Global Inflationary Pressures
- Emerging Market Outlook

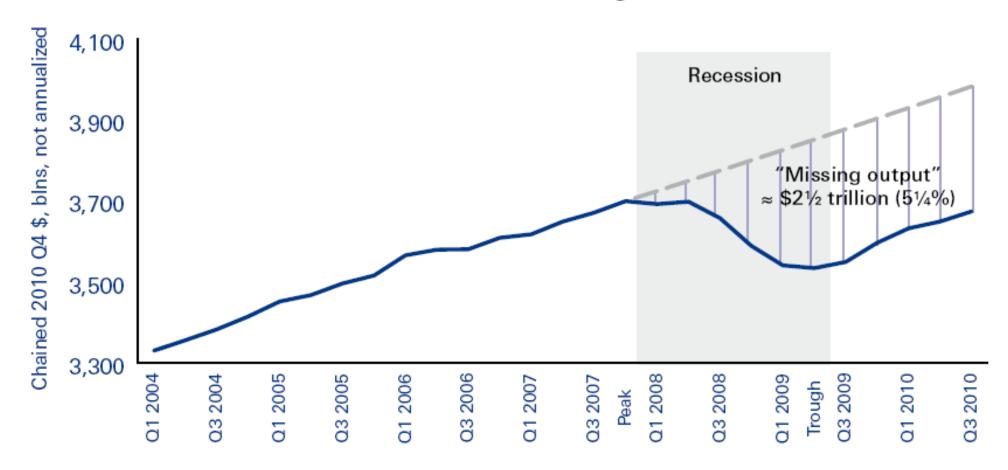

# Worst Performance From Prior Peak To Present Since The Great Depression

GDP - Path from Peak (2007Q4 - 2010Q4 vs. Max & Min For All Recessions, By Quarter, Since 1947) Best 3DP (% of Peak) Worst Current 

Quarters Past Peak

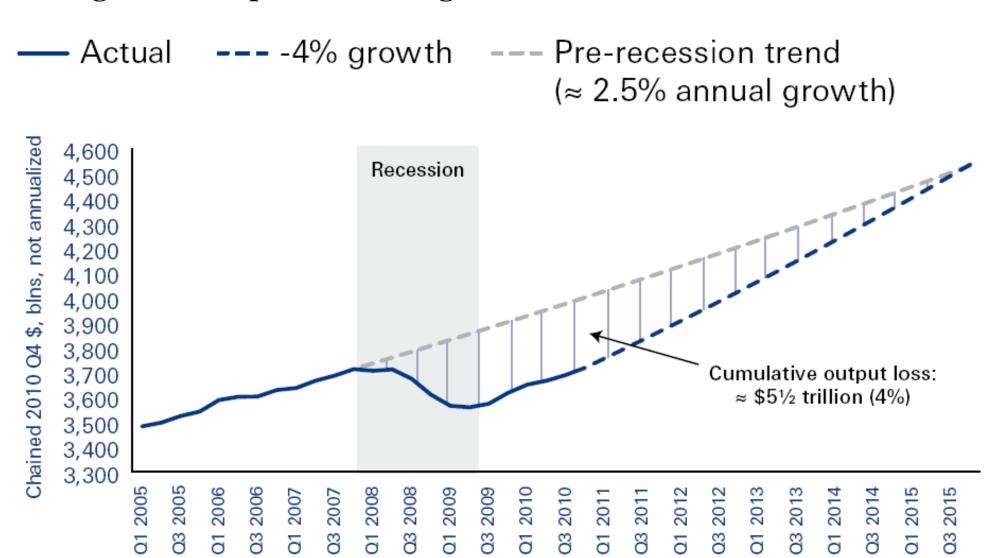

#### "Missing Output" In The Great Recession

- Actual
- --- Pre-recession trend (≈ 2.5% annual growth)

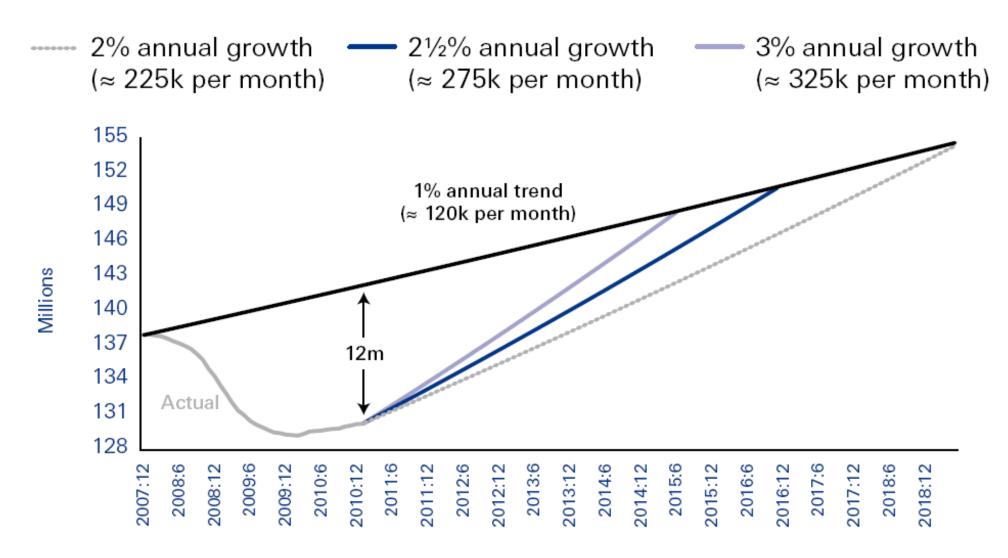

#### Real GDP: A Long Climb Back

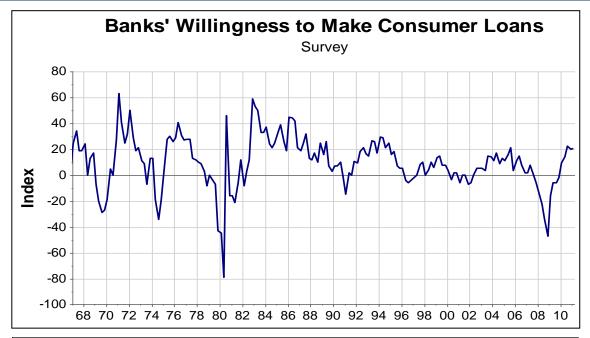

Would take four to five years of 4% growth (starting in 2011) to get back to pre-recession growth

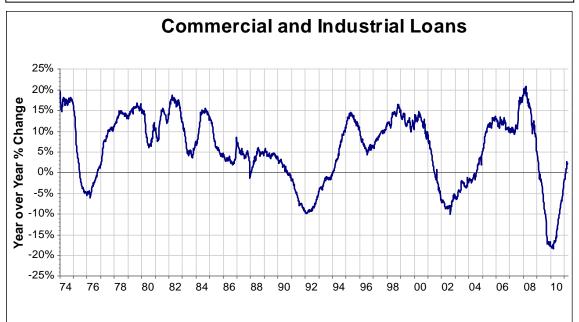

#### Non-Farm Payrolls – A Big Hole To Fill

#### Consumer and Commercial Lending Are Recovering ...

 Banks are willing to make consumer loans again

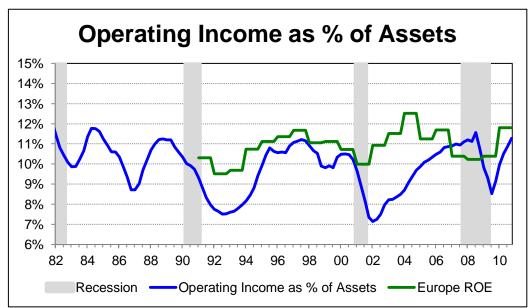

C&I lending is now growing

Source: Factset, 04/27/2011

#### Profitability Has Rapidly Returned To Pre-recession Levels

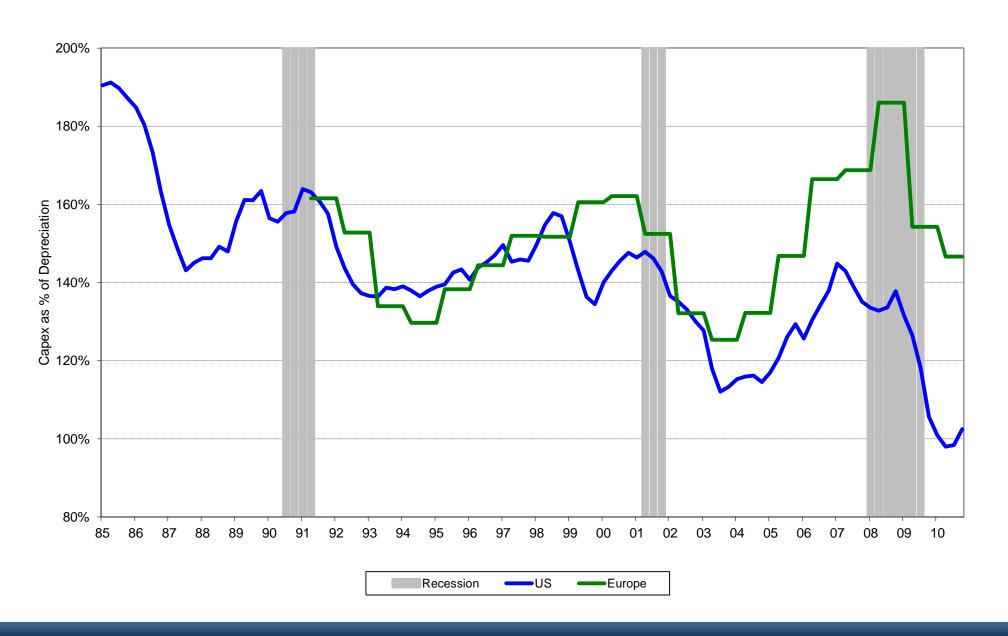

Back to historical highs

Companies cut discretionary expenses proactively

#### Capital Expenditures Equal to Depreciation....Not Sustainable

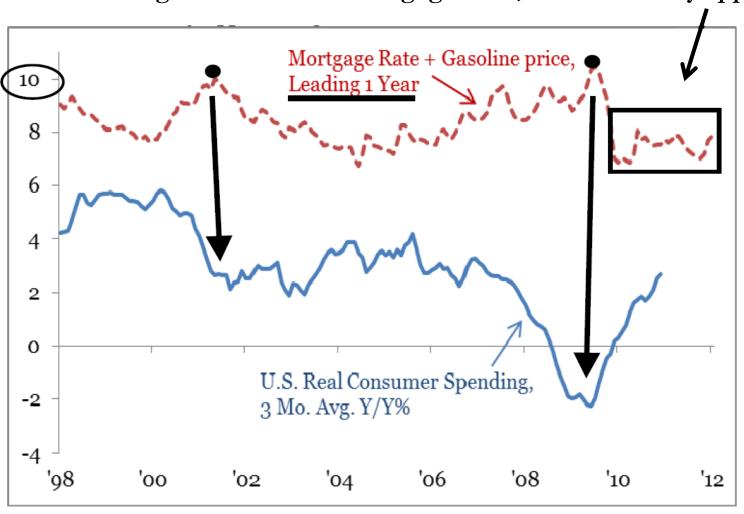

#### **Capital Expenditures as % of Depreciation**

#### U.S. Economy Can Probably Handle 6%

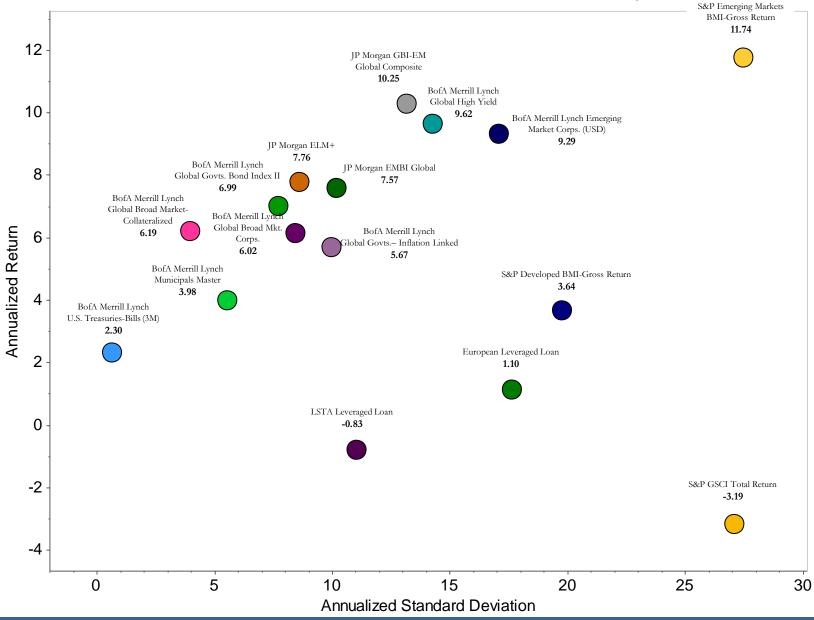

#### Mortgage Rates, or \$5 Gasoline, But Not Both

The economy becomes vulnerable as the sum of mortgage rates and gasoline prices reaches 10. With \$4 gasoline and 5% mortgage rates, we're currently approaching 9.

#### Major Asset Classes: Annualized Standard

Deviation vs. Annualized Return (03/2006 to 02/2011)

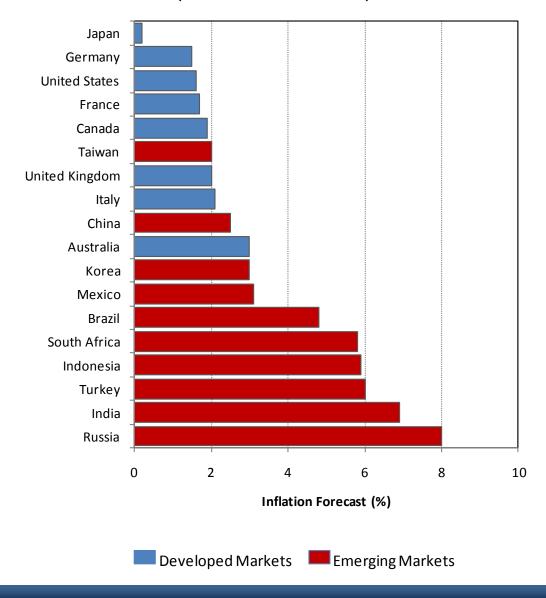

Source: Factset, as of 02/28/2011

### Inflation

#### Inflation

#### **Inflation Forecast for 2012**

(Consumer Price Index)

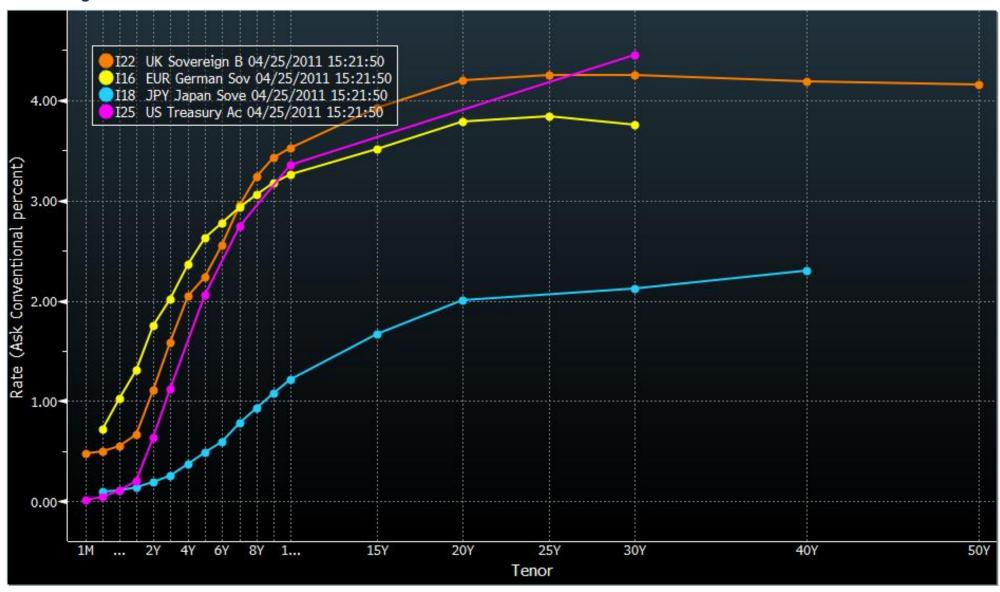

#### Interest Rates And Gold Prices Diverge.

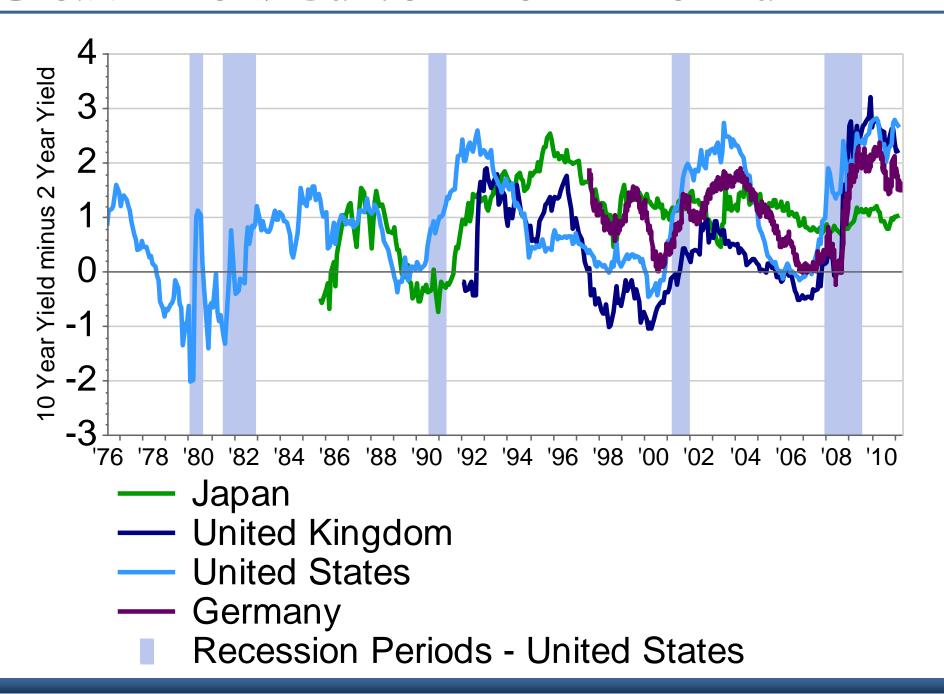

#### Yield Curves are steep and anchored to

#### very low short rates

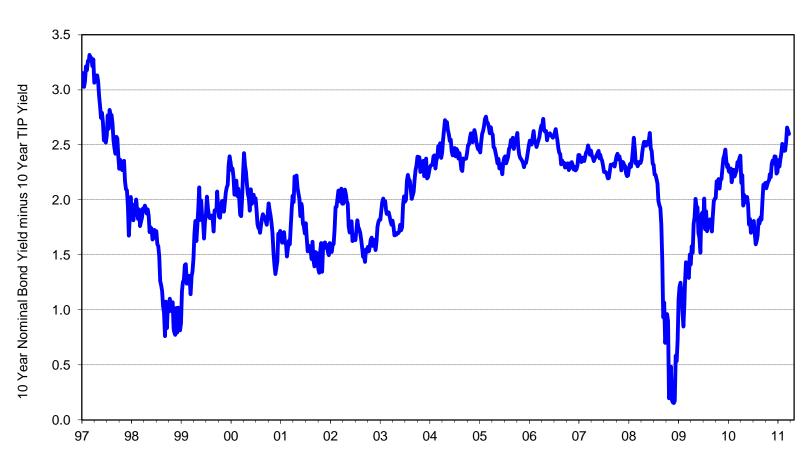

#### Global Yield Curve - Term Premium

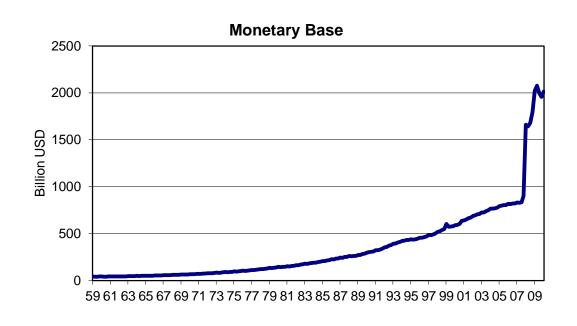

#### Investors Sanguine on Inflation

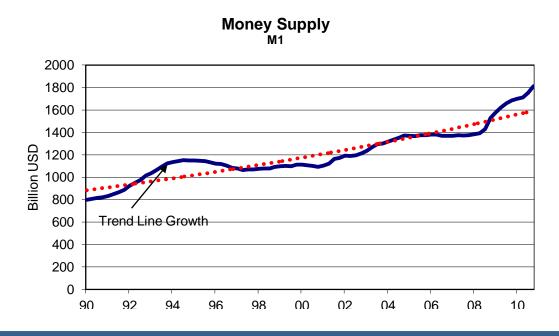

No big inflation worries yet!

#### Yet Leading Indicators Of Inflation Are Soaring ...

Extraordinary Federal Reserve intervention

 Money supply has begun to move higher than its long-term trend of 5%

Source: FED, 12/31/2011

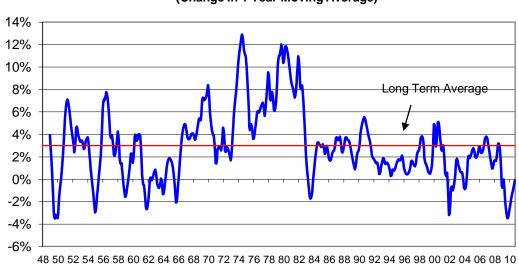

#### Input Costs Are Beginning To Rise....

#### Producer Price Index Year over Year

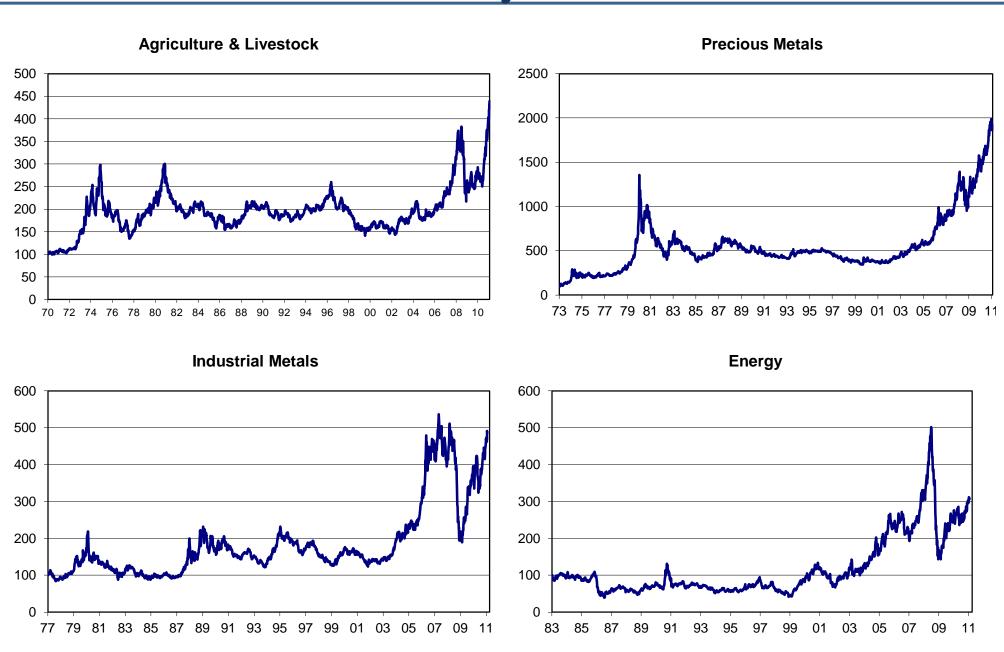

Slightly above longterm average

#### Unit Labor Costs (Change in 1 Year Moving Average)

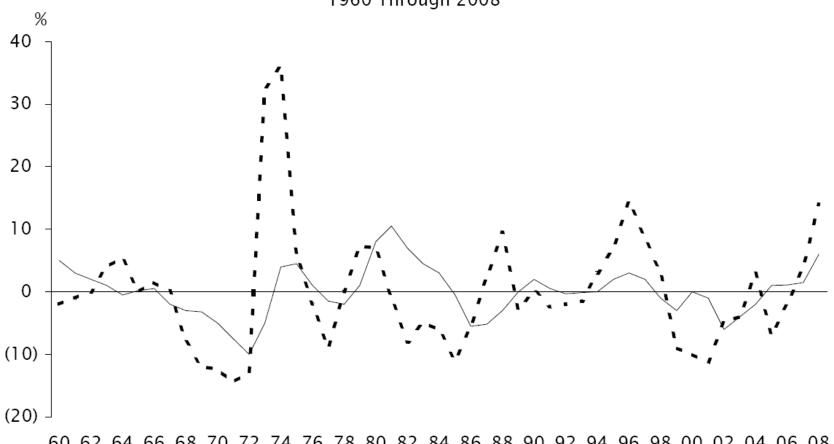

Labor costs are no longer falling

#### .... As Are Commodity Prices

#### Concerns About U.S. Debt

 A growing debt means rising interest payments. Even if interest rates increase only slightly, the sheer magnitude of debt means interest payments would rise significantly.

#### Interest Burden May Become Overwhelming

 More than one-half of the U.S. government's additional \$9 trillion in debt expected over the next ten years is projected to be interest.

## **Emerging Markets**

#### Relative Performance

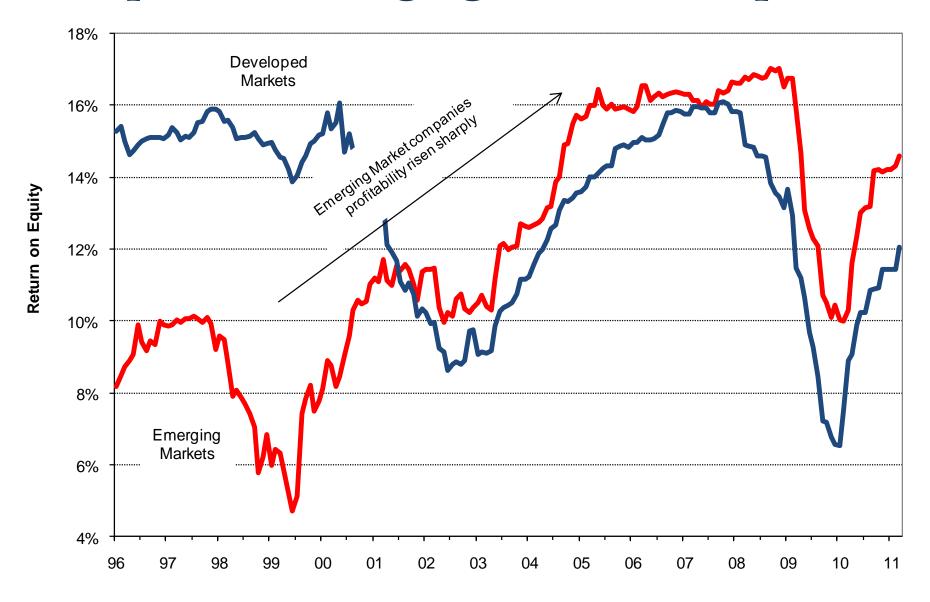

#### EM Performance (US\$) - Country Selection Matters

#### Profitability Has Converged

#### Developed vs. Emerging Market Companies

### Region

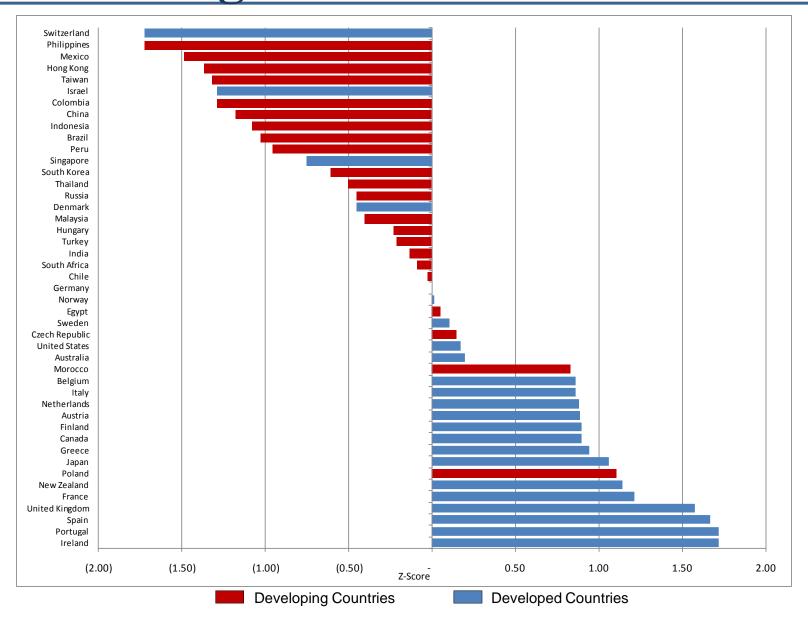

#### **Policy Rates**

#### Sovereign Debt Credit Default Swaps

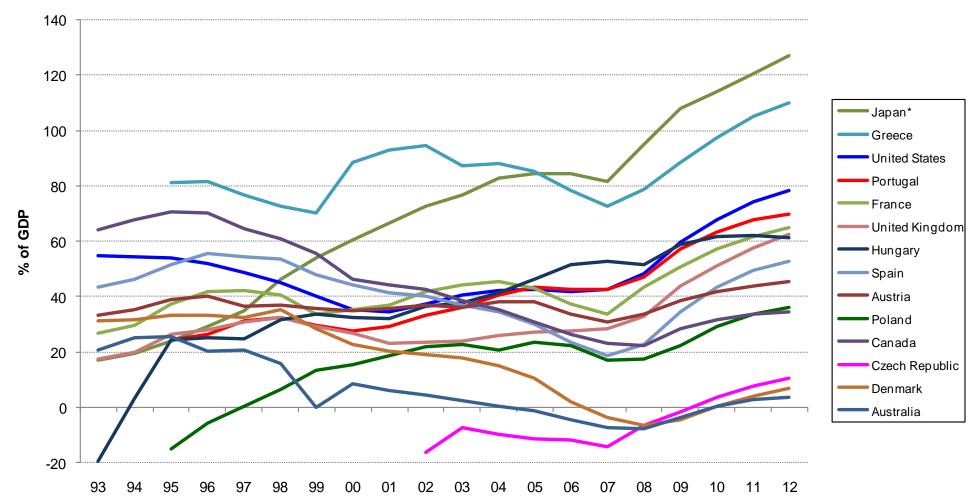

### DCM Sovereign Risk Model

The risk measurements in the spreadsheet are based on information collected from governmental economic reports from the World Bank, IMF and other well recognized organizations. The statistics are then converted into z-scores for comparison purposes and sorted to indicate the level of risk.

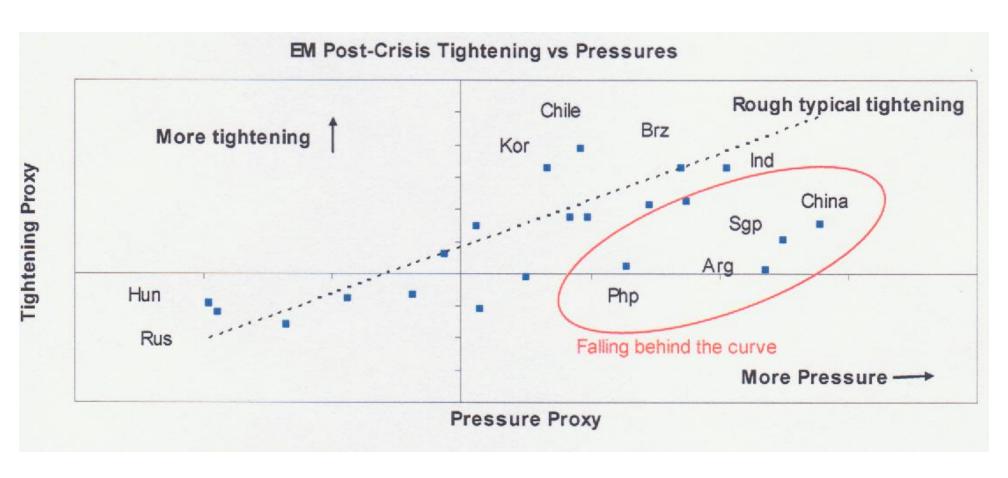

#### General Government Net Financial Liabilities

#### (% of GDP)

Note: Net debt measures are not always comparable across countries due to different definitions or treatment of debt (and asset) components. First, the treatment of government liabilities with respect to their employee pension plans may be different. Second, the range of items included as general government assets differs across countries. \*Includes the debt of the Japan Railway Settlement Corporation and the National Forest Special Account from 1998 onwards
